Importance of Making Slide

At Work

At Study

Before Designing The PowerPoint

- Know Your Goal
- Know Your Target Audience
- Write Your Content

Designing The PowerPoint

- Color

- Font

- Layout

- Image

- Animation

- Background

Colors

Use Contrast

Good	●	Good	●	Good	●
Bad	●	Bad	●	Bad	●
Good	●	Good	●	Good	●
Bad	●	Bad	●	Bad	●
Good	●	Good	●	Good	●
Bad	●	Bad	●	Bad	●

Fonts

USING
TOO MANY
FONTS IS
CONFUSING TO THE
READER IN
TYPOGRAPHY

Maximum 2 different fonts

Suitable Sizes for Each Text :

- **Titles:** 36 → 54 (It may reach to 70)
- **Subtitles:** 28 → 36
- **Bullet Points:** 24 → 28
- **Body Text:** 20 → 28 (Never go less than 18)
- **Captions :** 14 18

Layout

- Layout from a frame to a frame conveys sense of completeness
- Headings, subheadings and logos should show up in same position each frame
- Margin, font, font size and colors should be consistent

Animation

Don't overload your presentations
with animations

Images

- Use Images that Fit Your Content
- Too many , Can Distract the reader

Background

- Keep the background simple
- Stick to one style
- Match the background to your theme
- Avoid bright or neon colors

Avoid Doing These

Avoid Mixing Texts and Images

INTRODUCTION

Motor Car, any self-propelled vehicle with more than two wheels and a passenger compartment, capable of being steered by the operator for use on roads. The term is used more specifically to denote any such vehicle designed to carry a maximum of seven people.

The primary components of a car are the power plant, the power transmission, the running gear, and the control system. These constitute the chassis, on which the body is mounted. The power plant includes the engine and its fuel, the carburettor, ignition, lubrication, and cooling systems, and the starter motor.

Avoid Confusing

Avoid Long Paragraphs You aren't giving a Report

US Wireless Market – Q2 2010 Update

Executive Summary

The US wireless data market grew 6% Q/Q and 22% Y/Y to exceed \$13.2B in mobile data service revenues in Q2 2010 - on track so far to meet our initial estimate of \$14B for the year.

Having narrowly edged NTT DoCoMo last quarter for the first time, Verizon Wireless continued to maintain its number one ranking for the 1H 2010 in terms of the operator with the most mobile data revenues (though the difference was thinner than the smooch membrane). The total wireless connections for Verizon were almost 100M with Q2 1M being the traditional subscriber base. Rest of the 3 top US operators also maintained leading positions amongst the top 10 global mobile data operators.

Sprint had the first positive netadd quarter in 3 years and has been slowly and steadily turning the ship around. T-Mobile did better on the postpaid netadds but overall additions declined again. The larger question for the market is if 4 large players can stay competitive. Generally, the answer is no. But these are different times and there are a number of permutations and combinations that are possible.

The US subscription penetration crossed 95% at the end of Q2 2010. If we take out the demographics of 5 yrs and younger, the mobile penetration is now just 100%. While the traditional net-adds have been slowing, the "connected device" segment is picking up so much that both AT&T and Verizon added more connected devices than postpaid subs in Q2 2010. Given the slow postpaid growth, operators are fiercely competing in prepaid, enterprise, connected devices, and M2M segments.

Data traffic continued to increase across all networks. By 1H 2010, the average US consumer was consuming approximately 230 MB/mo up 50% in 6 months. US has become ground zero for mobile broadband consumption and data traffic management evolution. While it lags Japan and Korea in 3G penetration by a distance, due to higher penetration of smartphones and datacards, the consumption is much higher than its Asian counterparts. Given that it is also becoming the largest deployment base for HSPA+ and LTE, most of the cutting edge research in areas of data management and experimentation with policy, regulations, strategy, and business models is taking place in the networks of the US operators and keenly watched by players across the global ecosystem.

As we had forecasted, the tiered pricing structure for mobile broadband touched the US shores with AT&T becoming the first operator to change its pricing plan based on consumer consumption. We will see the pricing evolve over the next quarters as the US mobile ecosystem adjusts to the new realities and strategies for mobile data consumption.

Avoid Complicated
Graphs

Avoid Presenting More than One Point per Slide

**Avoid reading from
the slides ,
or give your back to
the audience**

After Designing The PowerPoint

- Rehearse
(Your presentation Skills, Slides,
and Informations)
- Check Spelling and Grammar
- Check all Technical Means

Let's Design my Powerpoint

What is a prioritization framework?

A prioritization framework is a structured approach or methodology used to make informed decisions about the allocation of resources, time, or attention to various tasks, projects, or goals. It helps individuals or organizations determine what to do first, what can be delayed, and what might not be worth pursuing at all. Prioritization frameworks are commonly used in business, project management, personal productivity, and various other contexts to ensure that efforts are focused on the most important and impactful activities.

Here are some key elements and principles commonly found in prioritization frameworks:

Criteria: Establish clear criteria or factors that will be used to evaluate and rank items for prioritization. These criteria could include factors like importance, urgency, cost, potential return on investment, alignment with strategic goals, and feasibility.

Scoring or Weighting: Assign scores or weights to each criterion to reflect their relative importance. This could involve quantifying the importance of each factor in the decision-making process.

Information: Gather data and information relevant to the items being prioritized. This could involve collecting customer feedback, or other sources of information.

Ranking: Use the criteria and weights to create a ranked list of items, allowing you to focus on the most important and urgent tasks first.

Technology innovation encompasses various aspects that drive the development and adoption of new technologies. These aspects are interrelated and often work together to bring about advancements in technology.
