Writing Proposals

Agenda

What's proposals and its importance ?

What're the types of proposals ?

What's Structure of proposal, and how to write it ?

Tips for Writing an effective proposal...

How to write Proposal as a Freelancer?

What's Proposals and its importance

- A proposal is a written document that outlines everything stakeholders need to know about a project, including the timeline, budget, objectives, and goals.
- It summarizes your project details and sells your idea, so stakeholders feel inclined to support the initiative.
- It's a **Persuasive** document designed to convince a reader to approve, fund, or act upon a specific project or solution.

The Importance :

1. Clarifies project Goals and Objectives.
2. Establishes Scope and Boundaries.
3. Prevent Resources Misallocation.
4. Provide a high-level TimeLine.
5. Identify Risks early.
6. Serves as a Communication tool.
7. Supports Project Approval and Funding

What're the Types of Proposals

What about Categories

1-Solicited Proposal :

It is response to a Request for Proposal (RFP). An RFP announces a project in detail and asks for bids from qualified teams. Because you're competing against other companies for this type of proposal, you must do thorough research and write persuasively.

The company may decide the Template of the proposal (structure)...

2-Unsolicited Proposal :

You'll send proposals without an RFP, meaning no one asked for them. In this case, you won't be up against other companies or teams, but you'll still need to be persuasive because you don't know whether the stakeholder needs you.

3-Informal Proposal :

You may have a client send you an informal request for a project proposal; in that case, you can respond with your project pitch. Because this isn't an official RFP, the rules are less concrete.

Or as Freelancing Proposals, like on Upwork, Khamسات.

What's structure of proposal and how to write it ?

1. Cover page

- Add title of your project
- Add names of people involved
- Add number of your Team

AI-Enhanced Writing Assistant

Team Members:

[Name]

Lead Developer

[Name]

Natural Language Processing Specialist

[Name]

User Experience Researcher

Project #420

Initiated: June 1, 2024

2.project description (Executive summery/Introduction):

The executive summery serves as the introduction to your project proposal. This section should summarize what's coming and persuade the stakeholder to continue reading.

Your executive summary should include:

- The problem your project plans to solve.
- The solution your project provides for that problem.
- The effect your project will have.

Project overview: *This initiative aims to develop an AI writing tool that produces more natural, human-like text. By analyzing patterns in human writing samples, the tool varies sentence structures and lengths and occasionally inserts minor imperfections like spelling errors or grammar mistakes. This nuanced approach seeks to create AI-generated content that feels authentic while remaining clear and understandable.*

3. Explain Project Background and Problem:

In this section, you'll go into the background of the project. Use references and statistics to convince your reader that the problem you're addressing is worthwhile and determine your scope.

Some questions to address include:

- What is the problem your project addresses?
- What is already known about this problem?
- Who has addressed this problem before/what research is there?
- Why is past research insufficient at addressing this problem?

You may need to make a SWOT analysis, gather as much information about that company

Background: Previous AI language models tended to generate text with rigid adherence to rules, lacking the natural variation of human writing. Our past research examining blogs, novels, and workplace writing revealed a need for more authentic-feeling AI-generated prose. This project builds on those findings.

Problem

The e-commerce platform has faced an increasing customer churn rate over the past six months. This has risen to 15%, compared to the industry average of 10%, negatively impacting revenue and long-term growth potential.

The primary factors contributing to this problem include a lack of personalized product recommendations, slow website performance, and inadequate customer support.

This issue is worth solving because reducing customer churn will result in higher customer retention, increased customer lifetime value, and greater business profitability.

4. Present Solutions and Objectives :

After presenting your problem, the next step is to present your solution. This section is your opportunity to outline your project approach in greater detail and define project's goals.

Items to include :

- Your vision statement for the project.
- Your project schedule, including important milestones.
- Project team roles and responsibilities.
- A risk register showing how you'll mitigate risk.
- Reporting tools you'll use throughout the project.

Note : You may not have all these items in your proposal format, but you can decide what to include based on the **project scope**. Consider using a **work breakdown structure** to organize this information; this section will likely be the longest and most detailed section of your proposal.

Objectives:

- *Create an AI writing model that outputs prose with human-like variations in style, tone, and structure*
- *Develop algorithms to analyze and replicate common quirks in human writing samples*
- *Implement user controls to adjust output formality and complexity as needed*
- *Achieve high ratings (>4 on a 5-point scale) in user testing for online authenticity and readability*

Scope: *The initial scope covers an AI model and tools to generate long-form writing (emails, reports, articles) with customizable levels of human realism. Potential future phases could extend to other domains like storytelling or dialogue.*

5. Define deliverables and goals :

Defining your project deliverables is a crucial step in writing your project proposal. Stakeholders want to know what you'll deliver at the end, whether that's a product, a program, or a technology upgrade. This is the section where they say, "Aha, this is what they'll use my resources for."

- The **End product** or final objective of your project,
- SMART Goals and Critical success factors that align with deliverables that you producing.

6. Timeline :

Timeline:

- Implementation planning (6 weeks)*
- Data collection and annotation (12 weeks)*
- Model training and refinement (16 weeks)*
- User testing and evaluation (8 weeks)*
- Documentation and delivery (4 weeks)*

7. List Resources you need :

Now that you've outlined your problem, approach, solution, and deliverables, you can go into detail about what resources you need to accomplish your initiative.

In this section, you'll include:

- 1. Project budget** The project budget involves everything from the supplies you'll need to create a product to ads pricing and team salaries. You should include any budget items you need to deliver the project here.

2. Breakdown of costs: This section should include research on why you need specific resources for your project; this way, stakeholders can understand how their buy-in is being used. This breakdown can also help you mitigate unexpected costs.

3. Resource allocation plan: Include an overview outlining where you plan to use the specific resources you need.

8. Risk analysis and how to Mitigate it :

Identify foreseeable challenges, evaluate their implications, and propose strategic countermeasures to prevent or mitigate risks while supporting the project's objectives.

Potential risks: *These include human rater biases during data labeling, overfitting models to limited writing styles, and user rejection of artificial text imperfections. We will employ techniques like randomized rater assignment, model cross-validation, and extensive user testing to mitigate these factors.*

9. State your conclusion with Strong CTA :

Finally, wrap up your project proposal with a persuasive and confident conclusion. Like the executive summary, the conclusion should briefly summarize the problem your project addresses and your solution. You can emphasize the effect of your project in the conclusion.

Adding strong CTA that shows how much the project will make a difference and how it will affect the company and the users. Otherwise, it will make a major shift in the field, and we are really waiting for you to respond to us by approving this project.

TO SUM UP :

A standard project proposal will typically include:

- **Title page:** Project name, client or stakeholder, proposal author, and submission date
- **Executive summary:** High-level overview of the problem, proposed solution, and expected outcomes
- **Problem statement or background:** Explanation of the issue or opportunity the project addresses
- **Proposed solution and approach:** Description of how the work will be completed, including methodology and deliverables
- **Project scope:** Clear definition of what's included, and what's not, from the project
- **Timeline and milestones:** Project phases, key dates, and major deliverables
- **Budget and resources:** Estimated costs, required resources, and pricing assumptions
- **Risks and assumptions:** Potential challenges, constraints, and dependencies
- **Success metrics:** How progress and outcomes will be measured
- **Terms, approvals, and next steps:** Contractual terms and instructions for moving forward

⚠️ The format of **Sponsorship Proposal** may differ a little...

-
- **Cover Page:** Project name, logos, and a professional title.
 - **Executive Summary:** The mission that you'll provide and the "Why" behind your project.
 - **Event Details:** Date, venue, and a clear description of your **Target Audience**.

Cont...

- **Sponsorship Packages:** Different tiers (Platinum, Gold, Silver) with varying benefits. Tailored service bundles and benefits corresponding to each tier.
- **Return on Investment (ROI):** measurable value for the sponsor, including brand exposure, direct engagement, and social impact.
- **Call to Action (CTA):** Contact details and an invitation for a meeting to discuss details.

Let's try

We want to make an event for students. It will be very useful and amazing and will help everyone in many things. The event will include many activities and speakers and maybe workshops. We think many students will come and it will be big.

The event is important because students need things and we want to help them. Also, it will be good for sponsors because they will get benefits.

We will do marketing on social media and الجامعة and maybe posters. The budget is not very high and we will manage it.

Thank you and we hope you support us.]

Is that a correct proposal?

How can we fix it??

Tips for writing Effective proposal...

- Know your Audience
- Keep it Persuasive
- Do your Research
- Good proposals need **Team Collaboration**
 - Increase innovation knowledge Share Optimized workflow
- Include any extra datasets, visual aids, documents, or references that enrich the proposal, offering additional clarity .

How to write a proposal as a Freelancer?

- (**VIP**) Make a strong Hook, that explain that you read the job post and understand the problem.
- Diagnose the Problem, and show how can you fix it, explain your approach, and show the Benefits that will be gained.
- Show your Experience, and your Work Samples, Portfolio.
- End with a Postscript(P.S.), then a CTA.
 - Postscript is a free advice to build trust suggest a thing that they haven't thought about.

Hi,
I saw your job and I think I can do it. I have experience in this field and I worked on many similar projects. I will deliver high-quality work on time. Please contact me to discuss more.
Thanks.

Hi [Client Name],

What caught my attention in your project is your focus on improving your website's conversion rate—not just traffic, and that's exactly where most businesses struggle.

I took a closer look at your requirements, and I noticed there's a great opportunity to optimize your landing page structure. For example, simplifying the call-to-action and improving page load speed could significantly boost conversions.

I've worked on a similar project where I helped increase conversion rates by 35% within 6 weeks by applying these exact strategies.

Here's how I can help you:

- Analyze your current funnel
- Optimize landing page UX
- Improve SEO structure for better visibility

I'd love to share a quick idea with you that could make an immediate impact.

P.S. One quick tip: try reducing the number of form fields on your landing page—this alone can increase conversions by up to 20%.

Prompt Engineering

Agenda

What's Prompt Engineering ?

How to write a Prompt, and What's Tokens ?

How to ensure Security in Prompt Engineering ?

What's Prompt Engineering ?

Prompt engineering is all about writing effective instructions to get the most accurate, helpful, and relevant outputs from AI models.

How to write a Prompt, and what's Tokens ?

1. Tokens:

Tokens are small units of text that a language model like ChatGPT uses to process language.

They can be words, parts of words, or punctuation.

```
"ChatGPT is amazing!"
```

```
Words = 3
```

```
Tokens ≈ 5
```

```
Tokens:
```

```
"Chat"
```

```
"GPT"
```

```
"is"
```

```
"amazing"
```

```
"!"
```

PROMPT: "Write a short proposal about marketing"

NO.words=6

Tokens $\approx$ 8

OUTPUT: 150 words proposal

Word $\approx$ 1.3 Tokens

Tokens = $150 \times 1.3=195$

Total Tokens =Input + Output =203 tokens

2. How to Write an efficient Prompt :

1. Put instructions at the beginning of the prompt

✗ Bad example:

```
Hey, GPT. This is an email I wrote last night. Can you revise it?
```

✓ Good example:

```
Revise the following email to sound more professional.
```

2. How to Write an efficient Prompt :

2. Use delimiters

✗ Bad example:

```
Revise the following email to sound more professional, but don't  
change anything else about it: I wanted to check if you had a chance to  
review the document I sent last week. Let me know what you think.
```

✓ Good example:

```
Revise the following email to sound more professional, but don't  
change anything else about it.
```

```
<email>I wanted to check if you had a chance to review the document I  
sent last week. Let me know what you think.</email>
```

2. How to Write an efficient Prompt :

3. Be very specific

✗ Bad example:

```
Write a blog post about prompt engineering.
```

✓ Good example:

```
Write a 500-word blog post about prompt engineering tips. The audience will be beginners, so use a friendly tone and give concrete examples for easier understanding.
```

2. How to Write an efficient Prompt :

4. Give the Model a Persona

✗ Bad example:

Explain blockchain.

✓ Good example:

```
<role>You are a tech educator who specializes in explaining complex topics in simple, relatable language. Your audience is made up of adults with no technical background – teachers, business owners, and everyday readers curious about new technology.</role>
```

```
<task>Write a 500-word blog post explaining what blockchain is, how it works at a basic level, and why it matters. Avoid jargon terms.
```

```
Use a friendly, engaging tone with real-world analogies to keep the explanation easy to follow and interesting.</task>
```

2. How to Write an efficient Prompt :

5. Provide relative Examples and References if Exist

✗ Bad example:

Write a product description for a new smartwatch.

✓ Good example:

```
<instruction>Create a product description for a new smartwatch with these specifications: fitness tracking (steps, heart rate, sleep monitoring), GPS navigation, smartphone notifications, music control, contactless payments, and health monitoring (ECG, SPO2).
```

```
Use the following example as a style guide.</instruction>
```

```
<example>Stay fit and connected with our sleek fitness tracker that monitors your heart rate, tracks your steps, and syncs seamlessly with your devices.</example>
```

2. How to Write an efficient Prompt :

6. Specify the desired Output Format

✗ Bad example:

```
List SEO tips for beginners.
```

✓ Good example:

```
List five beginner-friendly SEO tips in bullet points. For each tip, include a short explanation to help readers understand why it matters.
```

2. How to Write an efficient Prompt :

7. Supply the AI with relevant Data

✗ Bad example:

```
Summarize our Q1 sales performance.
```

✓ Good example:

```
Summarize the following Q1 sales data in 3 bullet points:
```

```
"Q1 revenue: $120k, up 15% YoY. Top product: SmartLamp. Customer growth: +8%."
```

2. How to Write an efficient Prompt :

8. Make Iterations if required

- Not the expected Output, No Problem you can write it again ...
- What about using **prompt chain** this time

TO SUM UP :

Start with clear instructions. AI models aren't human, so there's no need to worry about sounding too direct. Get straight to the point, state the task clearly, and avoid adding unnecessary fluff.

Use structure and examples. If you want a response in a particular format, such as a table, list, or code snippet, specify it in the prompt. If possible, show a concrete sample.

Iterate as you go. Don't try to get the perfect result in one shot. Start small, review the output, then adjust your prompt for better results.

Protect sensitive data. If you're using real-life information (like work documents), apply data masking or pseudonymization to avoid exposing personal or confidential details.

Example with main Important parts :

[persona]

[context]

[task]

You are a senior product marketing manager at Apple and you have just unveiled the latest Apple product in collaboration with Tesla, the Apple Car, and received 12,000 pre-orders, which is 200% higher than target.

Write an email to your boss, Tim Cook, sharing this positive news. **[format]**

The email should include a tl;dr (too long, didn't read) section, project background (why this product came into existence), business results section (quantifiable business metrics), and end with a section thanking the product and engineering teams.

[exemplar]

[tone]

Use clear and concise language and write in a confident yet friendly tone.

How to ensure security in Prompt Engineering ?

When we use AI to simplify our tasks, we often need to feed our proprietary data to the AI model. Without proper safeguards, this data can be exposed, misused, or leaked, especially when working with third-party models or cloud-based systems.

- Use data masking
- Pseudonymize data
- Generalize data

You're an expert social media copywriter who writes for thought leaders in education. You write highly engaging and compelling content.

I am an AI educator & content creator with 100,000 subscribers.

My audience is young Indian AI enthusiasts who don't want to depend on traditional education systems. They want to master AI and advance in their career so that they can impact the lives of millions of Indians.

Write an engaging tweet guiding students step by step about which AI skills to get a high-paying job right after college in India.

Write in the crisp & thoughtful style of Tim Ferriss. Do not use emojis & exclamation. Keep sentences short & simple for non-english speakers also. Do not exceed 280 characters.

Bad or Good
and Why??

"My Python code for the Simplex Method isn't working. How do I fix it?"|

Bad or Good
and Why??

"Act as a Corporate Partnership Specialist. Write a sponsorship pitch to Dell's marketing department for 'Salakhana'26'. Focus on providing them direct access to 500+ Computer Science students for recruitment. Highlight our 'Tech-Innovation Zone' where their latest hardware can be demoed by students. Use a professional, ROI-driven tone."|

Bad or Good
and Why??

"Summarize this spreadsheet data about sales and tell me what happened."|

Bad or Good
and Why??

Let's try

Activity...2

Choose a post topic AI Model make it for you ☐

Write your Prompt and be Specific and Obvious

Activity...3

Write a Prompt that make a full Structured Proposal :

- **Make it a Chain Prompt .**
- **Give it an Example to your Proposal that you want .**
- **Check if the model give you the answer that you want or not ?!**

Recap...

Thank You
